

TENSORNOVA ACADEMY

Build Skills. Build Intelligence. Build the Future.

GLOBAL COURSE CATALOGUE

Elite Professional & Executive Training Programs

Technology · Artificial Intelligence · Business · Finance

A New Era of Industry-Driven Higher Education

Designed for students, professionals, and global organizations.

1 Welcome & Strategic Vision

1.1 Message from the Chief Executive Officer

At TensorNova, we believe that education is the ultimate catalyst for human and industrial progress. We are living through an unprecedented epoch where the boundaries of technology, artificial intelligence, finance, and business management are merging at an accelerated pace. Traditional academic institutions are struggling to keep pace with the real-time demands of the modern enterprise.

This gap is where TensorNova operates. Our mission is to democratize elite, high-impact, industry-driven education. We provide robust, project-based, and AI-powered paths for learners worldwide to not just survive but lead the next wave of industrial and digital transformation.

Whether you are a university graduate aiming to acquire cutting-edge engineering skills, an executive driving AI transformation within an enterprise, or a finance professional mastering quant models, this catalogue serves as your blueprint for career acceleration.

Join us, and build the future of intelligence.

– Dr. Evelyn Vance, CEO & Founder, TensorNova

1.2 About TensorNova

TensorNova is an elite global education provider serving over 150,000 learners across 40 countries. Our curricula are engineered in collaboration with academic boards from top-tier universities and engineering organizations from global industry leaders. We maintain offices in Silicon Valley, London, Mumbai, and Singapore.

TensorNova Global Impact Ecosystem

Connecting 150+ Tech Giants, 50+ Global Universities, and 200+ Professional Mentors

1.3 Why Choose TensorNova

- **Project-Based Architecture:** Every course requires learners to construct real-world systems, build software portfolios, write financial algorithms, or formulate actual business marketing strategies.
- **Global Industry Mentors:** Live guidance from Senior Engineers, AI Researchers, Venture Capitalists, and Managing Directors.
- **TensorNova AI-Tutor System:** 24/7 hyper-personalized learning companion that debugs code, reviews strategy papers, and evaluates quantitative formulas in real-time.
- **Enterprise-Grade Laboratories:** Zero-setup, browser-based sandbox environments preloaded with AWS/GCP, PyTorch, Kubernetes, and Bloomberg terminal interfaces.

2 Our Learning Philosophy

The core pedagogical model of TensorNova centers on cognitive scaffolding, iterative development, and industry alignment. We reject passive video consumption. Instead, our learning model consists of five pillars:

The Five Pillars of TensorNova Pedagogy

- Acquisition (20%):** Conceptual mastery through curated high-density micro-lectures, real-time interactive system designs, and targeted whitepapers.
- Application (30%):** Active coding and application labs inside integrated sandbox playgrounds with immediate test-driven feedback.
- Coaching (20%):** Weekly cohort-based code reviews, architectural critique sessions, and live strategy workshops with elite practitioners.
- Creation (20%):** Rigorous Capstone projects designed by corporate partners, demanding production-ready code or formal board presentations.
- Career Alignment (10%):** Portfolios packaged automatically for LinkedIn, Github, and industry verification registries, unlocking pre-vetted recruiter networks.

Table 1: Traditional vs. TensorNova Educational Paradigm

Metric	Traditional Education	TensorNova Model
Curriculum Update Cycle	3 to 5 Years	Monthly / real-time industry updates
Instructional Delivery	Passive Lectures & Theory	Interactive Sandbox Labs & Active Code
Support System	Asymmetric TA office hours	Instant AI-Tutor + Peer Network + 1-on-1 Mentors
Evaluation Metrics	Standardized Written Tests	Production Deployments & Capstone Portfolios
Industry Readiness	Requires post-hire onboarding	Day-one ready for specialized roles

3 School of Technology

The School of Technology provides rigorous, production-grade training structures aimed at shaping modern software engineers, cloud architects, database developers, and cybersecurity professionals.

3.1 Program Matrix: Cloud & Full-Stack Systems

Table 2: School of Technology Career Tracks

Track Name		Duration	Key Technologies	Target Career Role
Enterprise Full Stack Dev		24 Weeks	React, Next.js, Angular, Node.js, Spring Boot	Principal Full-Stack Engineer, Technical Lead
DevOps & Site Reliability		16 Weeks	AWS, GCP, Docker, Kubernetes, Ansible	SRE, Cloud Infrastructure Specialist, DevOps Architect
System Architecture		12 Weeks	Microservices, Redis, Kafka, PostgreSQL	Principal Architect, Senior System Engineer
Cybersecurity & Defense		20 Weeks	Linux, Wireshark, OWASP, Metasploit	SecOps Analyst, Penetration Tester, Security Engineer

3.2 Course: Enterprise Full Stack Software Engineering

3.2.1 Overview

A complete end-to-end curriculum transforming intermediate developers into architectural experts. You will build and deploy multiple production-grade web systems, master system scaling, and learn to write optimized, secure code using modern frameworks.

3.2.2 Skills & Tools Covered

- **Frontend Stack:** React, Next.js, Angular, Vue, TailwindCSS, TypeScript.
- **Backend Stack:** Node.js, NestJS, Django, Spring Boot, Go, Rust, .NET.
- **Database & Cache:** MySQL, PostgreSQL, MongoDB, Redis, Cassandra.
- **Architecture:** Microservices, API Development (GraphQL, REST, gRPC), System Design, Web3, Blockchain.

3.2.3 Weekly Curriculum Roadmap

Weeks 1–4: Advanced UI Design & Hydration. Dynamic state engines, TypeScript optimization, server-side rendering with Next.js, performance profiling in React.

Weeks 5–8: Robust Server-Side Systems. Backend patterns in NestJS and Spring Boot, schema migrations, REST vs. gRPC communication paradigms, secure authentication (JWT, OAuth2, SAML).

Weeks 9–12: Microservices & Event-Driven Patterns. Building distributed applications, message brokers with Apache Kafka and RabbitMQ, data synchronization strategies.

Weeks 13–16: Database Scaling & Caching. Read/write replicas, sharding databases, caching layers using Redis, complex search architectures via Elasticsearch.

Weeks 17–20: Infrastructure & Continuous Integration. Dockerizing full-stack builds, orchestrating microservices locally with Kubernetes, automating testing with GitHub Actions.

Weeks 21–24: Enterprise Capstone Project & Placement. Architectural planning, building, securing, scaling, and deploying a modern web application under active peer and mentor review.

3.2.4 Industry Projects & Portfolio Deliverables

Project Showcase: High-Throughput E-Commerce Core

Construct an enterprise-grade API with a Next.js front-end and a microservices back-end running on Go and Node.js. It must support high-concurrency order placement, handle transactional rollbacks across database instances via Saga patterns, and utilize Redis for distributed locking during flash sales.

3.2.5 Career Outcomes & Salary Insights

Graduates secure placements as Senior Software Engineers and Full Stack Architects. Standard entry salaries range from \$110,000 to \$165,000 in the US, and £70,000 to £110,000 in the UK.

4 School of Artificial Intelligence

The School of Artificial Intelligence focuses on practical engineering rather than just mathematics. We train engineering leaders to build, optimize, and deploy cutting-edge AI architectures, pipelines, and autonomous workflows.

4.1 AI & Data Engineering Track Comparison

Table 3: School of Artificial Intelligence Curriculum Map

Track Name	Duration	Key Frameworks	Project Deliverable
LLM & GenAI Engineering	18 Weeks	PyTorch, LangChain, VectorDBs, LlamaIndex	Real-time RAG Agent with dynamic tools and self-correction
MLOps & Infrastructure	16 Weeks	Kubernetes, Kube-flow, MLflow, AWS	Auto-scaling training and deployment pipeline with drift detection
Data Engineering	14 Weeks	Spark, Kafka, Airflow, Snowflake	Petabyte-scale streaming lakehouse architecture with monitoring

4.2 Course: LLM & Generative AI Engineering

4.2.1 Overview

Go beyond prompt engineering. Learn the complete lifecycle of LLMs: data prep, fine-tuning, retrieval-augmented generation (RAG), tool calling, and designing multi-agent orchestration frameworks using PyTorch and modern vector storage layers.

4.2.2 Skills & Tools Covered

- **Core AI:** ML, Deep Learning, Neural Networks, PyTorch, TensorFlow.
- **Generative Tech:** LangChain, LlamaIndex, Vector Databases (Pinecone, Qdrant, Milvus), Prompt Engineering.
- **Engineering LLMs:** RAG Systems, AI Agents, LLM Fine-tuning (LoRA, QLoRA), MLOps, Reinforcement Learning.

4.2.3 Weekly Curriculum Roadmap

Weeks 1–3: Neural Networks & Machine Learning Foundations. Mathematics of neural back-propagation, dense embeddings, building convolutional and recurrent neural models in PyTorch.

Weeks 4–6: Natural Language Processing & Transformers. Self-attention mechanics, transformer architecture, fine-tuning pre-trained models on specialized tokenizers.

Weeks 7–9: Advanced RAG Infrastructures. Document ingestion, embedding, vector database index scaling, hybrid keyword-semantic query routing, metadata filtering.

Weeks 10–12: Agentic Architectures & Tool Execution. ReAct frameworks, functional tool-calling integrations, multi-agent coordination with LangGraph, runtime loop safeguards.

Weeks 13–15: LLM Fine-Tuning & Distillation. Dataset curation, quantization strategies (QLoRA), alignment tuning (RLHF, DPO), evaluating models with custom benchmarks.

Weeks 16–18: GenAI Systems at Scale. Quantized model deployment using vLLM, securing LLM boundaries (NeMo Guardrails), rate limiting, and inference caching structures.

4.2.4 Practical Labs & Case Studies

Lab: Building an Autonomous Financial Analyst Agent

Develop an agentic pipeline connected to live market APIs, database instances, and PDF reports. The agent must independently synthesize news feeds, analyze financial sheets, compile structured tables, and generate PDF summaries without human intervention.

4.2.5 Career Opportunities & Salaries

Target roles include Generative AI Engineer, MLOps Engineer, and NLP Specialist. Median global salaries for deep technical graduates in this domain range from \$140,000 to \$220,000.

5 School of Business

The School of Business is built to cultivate modern operators, entrepreneurial leaders, and elite product strategists who thrive in hyper-growth, data-centric organizational structures.

5.1 Core Executive Programs

Table 4: School of Business Core Cohorts

Program Title	Duration	Key Key gies	Methodolo- gies	Core Business Cases
MBA Foundation	20 Weeks	Financial Leadership, Supply Chain	Strategy, Analytics, User Growth, Agile Strategy	Scaling a SaaS platform to \$50M ARR
Tech Product Management	12 Weeks	Product User Strategy	Analytics, Growth, Agile Strategy	Designing, scoping, and launching a global product feature
Entrepreneurship	16 Weeks	Venture Customer Validation, Operations	Capital, Validation, Operations	Structuring a complete business model and pitch deck

5.2 Course: Technical Product Management (TPM)

5.2.1 Overview

A highly interactive program training product leaders to operate at the intersection of business strategy, user experience design, and software engineering. Learn to speak developer language, manage complex backlogs, and run growth experiments.

5.2.2 Skills & Learning Outcomes

- **Strategy & Launch:** Digital Marketing, Brand Management, Product Marketing, Pricing, Positioning, Sales Pipeline.
- **Analytical Execution:** Product Analytics (Amplitude, Mixpanel), Database Analytics (SQL), A/B Testing, Scrum, Product Roadmaps.
- **Venture & Scale:** International Business, Supply Chain, Business Analytics, Capital Allocations, Startup Building.

5.2.3 Curriculum Breakdown

Strategic Alignment: Defining the Core Product Strategy, TAM, SAM, and Competitive Positioning. Mapping value-proposition matrices and creating comprehensive target personas.

Product Design & Prototyping: Dynamic User Journeys, UI/UX Wireframing, API-first design principles, and engineering detailed Product Requirement Documents (PRDs).

Technical Depth for PMs: Demystifying system architectures, databases, and continuous delivery loops. Communicating effectively with engineering and handling security constraints.

Growth & Monetization Strategy: Formulating pricing tiers, optimization metrics, and dynamic funnel metrics. Executing cohort-retention analyses and user lifecycle modeling.

The Capstone Case Study: Building an actual product proposal containing technical diagrams, market analysis, financial models, user validation studies, and a launch timeline.

5.2.4 Real-World Case Studies

Harvard-Style Case Analysis: The Uber Fleet Expansion

Students analyze Uber's international logistics expansion, diagnosing pricing challenges, supply and demand matching networks, driver acquisition cost matrices, and localized operational hurdles in dynamic regulatory environments.

6 School of Finance

The School of Finance delivers quantitative, analytical, and investment-focused education designed to train top-tier wealth managers, quantitative traders, investment bankers, and financial risk officers.

6.1 Quantitative & Institutional Tracks

Table 5: School of Finance Executive Tracks

Program Name	Duration	Core Platforms	Target Career Role
Quantitative Trading	18 Weeks	Python, Pandas, backtrader, NumPY, Keras	Quantitative Research Associate, Algorithmic Trader
Investment Banking	16 Weeks	Excel, Power BI, PitchBooks, SQL	IB Analyst, M&A Associate, Private Equity Generalist
Corporate Finance	12 Weeks	Python for Finance, Tableau, Financial Modeling	Corporate Treasurer, Strategic Financial Director

6.2 Course: Quantitative Finance & Algorithmic Trading

6.2.1 Overview

Master the mathematical frameworks, statistical software tools, and software code required to research, backtest, and deploy systematic trading models in global financial markets.

6.2.2 Learning Outcomes & Core Tools

- **Trading Frameworks:** Price Action, Technical Analysis, Options Trading, Futures, Commodities, Portfolio Management, Derivates.
- **Advanced Modeling:** Corporate Finance, Valuation, Financial Modeling, Equity Research, Fixed Income, Risk Management.
- **Mathematical Tools:** Python for Finance, Excel for Finance, Power BI, Quantitative Finance, Algo Trading, CFA & FRM Prep.

6.2.3 Comprehensive Curriculum

Module 1: Foundations of Financial Markets. Asset classes, market microstructures, order execution mechanics, limit order books, and price discovery processes.

Module 2: Python for Quantitative Analysis. Statistical modeling with Pandas and NumPy. Time-series analysis, stationarity tests, autoregressive models, and volatility modeling using GARCH frameworks.

Module 3: Algorithmic Strategy Development. Designing mean-reversion, trend-following, and statistical arbitrage strategies. Sourcing data from live market APIs.

Module 4: Backtesting & Risk Engine Design. Building custom backtesting engines, analyzing slippage, transaction costs, execution delay, and key risk metrics (Sharpe, Sortino, Drawdown limits).

Module 5: Options Trading & Complex Derivatives. Black-Scholes pricing, options Greeks hedging, volatility trading strategies, and exotic product pricing.

Module 6: Capstone: Deploying a Systematic Trading Engine. Building an execution-ready system with broker APIs, continuous risk monitors, and automated fail-safes.

6.2.4 Software Tools & Capstone Portfolio

Capstone: Systematic Volatility Arbitrage Strategy

Build an automated strategy in Python that monitors volatility across options chains, detects discrepancies between implied and realized volatility, manages delta-hedging portfolios, and executes risk-balanced trades via simulated APIs.

7 Corporate Training Solutions

TensorNova provides customized enterprise upskilling programs to help global enterprises, institutions, and government bodies navigate fast-moving technological shifts.

Enterprise Transformation Delivery Model

Assessment → Custom Path Design → Sandbox Deployment → Impact Metrics

7.1 Industry Vertical Solutions

Banking & Financial Institutions: Transitioning legacy finance processes to cloud networks, training quantitative risk modeling teams, and implementing predictive AI models for fraud detection.

IT & Technology Companies: Accelerating transition to cloud-native microservices, optimizing CI/CD workflows, and preparing developers for generative AI systems.

Healthcare & Pharma: Designing HIPAA-compliant cloud architectures, developing secure internal data pipelines, and optimizing research workflows with deep learning models.

Manufacturing & Logistics: Transitioning factory monitoring to IoT platforms, scaling real-time inventory systems, and automating predictive maintenance reporting.

Government & Public Sector: Developing secure digital services, building threat-detection frameworks, and hosting technical upskilling workshops for agency teams.

7.2 Executive Training & Workshops

Our custom workshops help leadership teams make informed technology decisions:

- **Generative AI for Leaders:** 2-day workshop focused on high-level AI feasibility, cost modeling, risk management, and ROI tracking.
- **Modern Cloud & DevOps Operations:** Practical session helping leaders understand cloud costs, microservices migrations, and security postures.
- **Strategic Cybersecurity Planning:** Managing risk profiles, regulatory compliance (GDPR, HIPAA, SOC2), and setting up response processes.

8 Career Services & Student Benefits

8.1 Career Transformation Ecosystem

Our structured services prepare students and career switchers to transition into competitive roles:

Core Services Breakdown

- **Professional Resume Optimization:** Aligning technical resumes with Applicant Tracking Systems (ATS) to highlight key projects.
- **LinkedIn Portfolio Building:** Transforming profiles into professional assets that attract technical recruiters.
- **Realistic Mock Interviews:** Practicing with live technical and soft-skill interviews led by industry experts.
- **Technical Coding Challenges:** Providing continuous practice on complex algorithmic problems and systems design questions.
- **Direct Placement Support:** Sharing talent profiles directly with our hiring networks in high-tech and finance hubs.

8.2 Student Benefits

All TensorNova students receive full access to our community and learning tools:

- **Live Interactive Sessions:** Weekly Q&As, live problem-solving labs, and collaborative code reviews.
- **High-Quality Recordings:** Lifetime access to all session recordings and updated course materials.
- **Active Mentor Network:** Professional guidance from active engineering and business leaders.
- **Integrated AI Assistant:** 24/7 support for debugging code, reviewing business plans, and explaining core concepts.

8.3 Certification & Badging System

Upon completing a track and passing the final assessments, students receive:

- **Official Verifiable Certificates:** Digital credentials secured by cryptographically signed verification layers.
- **Professional Digital Badges:** Shareable credentials format-aligned for LinkedIn.
- **Interactive Portfolio Links:** Highlighting code repositories, capstone summaries, and mentor ratings.

9 Platform Features & Pricing Models

9.1 The TensorNova Learning Management System

Our proprietary platform provides a modern, integrated learning experience:

TensorNova Integrated Platform Portal
Interactive Video · Browser Code Sandbox · Real-time AI Debugger · Progress Tracker

Interactive Code Sandbox: Run code, manage database queries, and test system deployments directly in your browser with zero installation.

Automated Progress Trackers: Personalized dashboards to monitor completion milestones, feedback loops, and career readiness scores.

Collaborative Forums: Active discussion spaces to connect with peers, form study cohorts, and coordinate projects.

9.2 Pricing Models

Table 6: Subscription & Purchase Framework

Plan Tier	Pricing (USD)	Billing Fre- quency	Key Inclusions
Individual Course	\$499 – \$899	One-time payment	Full course access, sandbox labs, and digital certificate
Complete Career Track	\$2,499	One-time / in- stallment	Complete curriculum, 1-on-1 mentorship, and placement prep
TensorNova Pro Plus	\$149 / Month	Monthly billing	Unlimited access to all courses, projects, and live lectures
Enterprise Tier	Custom Quote	Contract-based	Dedicated portal, customized curricula, and SLA support

10 Frequently Asked Questions

1. **What are the typical prerequisites for enrolling in TensorNova courses?**
Prerequisites vary. Foundational courses require only basic computer skills, while advanced software engineering and quantitative finance tracks require basic familiarity with programming and mathematics.
2. **Do your courses feature live or pre-recorded learning paths?**
We use a hybrid model: foundational content is delivered via clear, structured pre-recorded modules, supplemented by live weekly code reviews, industry panels, and mentorship sessions.
3. **How long do I maintain access to my course materials?**
All individual and career track purchases include lifetime access to course content, project assignments, code templates, and future curriculum updates.
4. **How does the browser-based code sandbox function?**
Our platform spins up lightweight container sandboxes directly in your browser, pre-configured with the required frameworks (PyTorch, Node.js, databases), eliminating complex local environment setups.
5. **Are your certifications accredited by universities or industry bodies?**
Our certificates are recognized by leading global employers. We also partner with select universities to offer credit transfers for specific career tracks.
6. **What support is available if I get stuck on a coding assignment?**
Our AI learning assistant provides instant debugging help and explanation 24/7. Additionally, you can submit questions on our forum to get feedback from peers and mentors.
7. **Are there payment plans available for your career tracks?**
Yes, we offer flexible interest-free installment options over 3, 6, or 12 months for all professional tracks.
8. **How are the final Capstone projects reviewed and graded?**
Capstones are evaluated by our mentor panel against key industry standards: code efficiency, architectural clarity, security practices, and thorough documentation.
9. **Can I transition from a monthly subscription to a career track?**
Yes, you can easily transition and apply any active subscription credits toward full career track enrollments.
10. **Does TensorNova offer formal job placement guarantees?**
While we cannot guarantee employment, our placement program provides comprehensive support, including resume reviews, mock interviews, portfolio packaging, and direct introductions to hiring partners.
11. **Is the platform accessible on mobile and tablet devices?**
Yes, the TensorNova mobile application supports offline downloads for core lecture videos, reading assignments, and discussion forums.
12. **Do you offer custom onboarding and solutions for corporate groups?**
Yes, our enterprise solutions team designs custom onboarding tracks, sets up private progress dashboards, and coordinates dedicated team workshops.

13. How often are your course curricula updated?

Our educational content is audited and updated quarterly to keep pace with modern technical frameworks, API releases, and changing industry requirements.

14. Can I pause my career track enrollment if my work schedule changes?

Yes, students can pause active tracks once per enrollment for up to 60 days without losing their progress or incurring fees.

15. What is your refund policy?

We offer a full 14-day, no-questions-asked refund policy on all individual courses and career tracks from the start of the cohort.

16. Are there discount opportunities for university students?

Yes, we offer up to 30% off individual tracks for verified college and university students.

17. Do your advanced AI courses cover model hosting and deployment cost-efficiency?

Yes, our MLOps and LLM engineering tracks place a strong emphasis on model optimization, quantization, and managing hosting costs in production.

18. How are mentor matching processes handled?

Students in career tracks are matched with industry mentors based on their career goals, industry focus, and technical background.

19. Can international students enroll in your executive programs?

Absolutely. Our courses are designed for international students, with all lectures and materials delivered in clear, professional English.

20. Does TensorNova provide preparation paths for standard industry exams (e.g., AWS, CFA)?

Yes, our specific tracks contain built-in preparation modules, practice tests, and question banks mapped to exams like AWS Cloud Practitioner, CFA, and FRM.

21. Is there a limit on how many times I can attempt assessment exams?

You can retake assessment tests up to three times per term, with a mandatory 48-hour study window between attempts.

22. What security standards are implemented on your online exams?

We use non-intrusive, secure testing setups to maintain evaluation integrity while ensuring a smooth experience for students.

23. Does your platform support collaborative group coding projects?

Yes, our collaborative sandboxes allow multiple students to write, review, and debug code together in real-time.

24. Can I complete the programs entirely on my own schedule?

Yes, our self-paced tracks allow you to work at your own speed, with live mentor support available when you need it.

25. Who should I contact to resolve platform billing or account issues?

For any billing, account, or support questions, please email our help desk at support@tensornova.com, and we will respond within 24 hours.
